

FIGURE 1

Visual Graphic Used in Decision-Aid

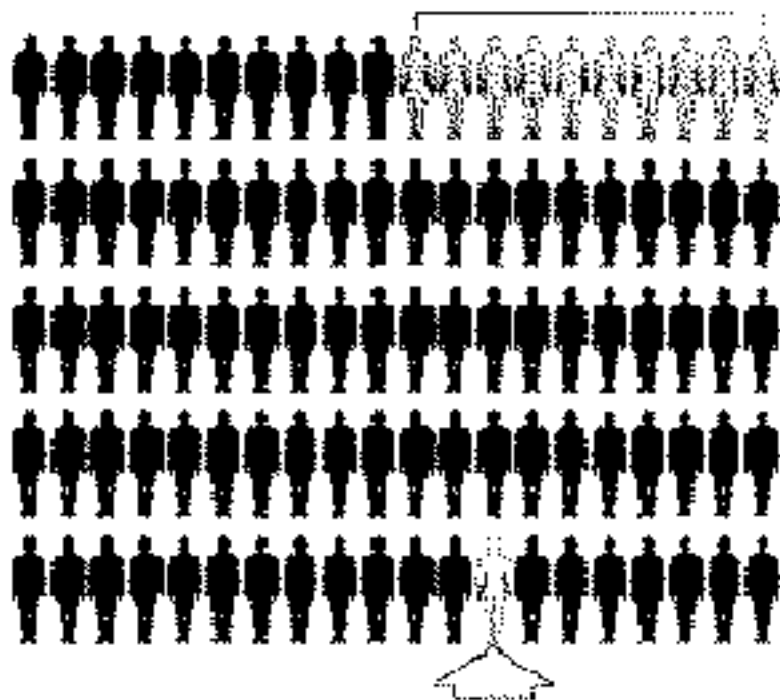

A graphic of highlighted human figure representations was used in the decision-aid to convey the frequency of outcomes of prostate cancer screening with prostate-specific antigen and digital rectal examination.

Out of 100 men being tested for prostate cancer:

10 men will have abnormal test results and of these:

3 men will have prostate cancer.

7 men will not have prostate cancer.

90 men will have normal test results and out of these 90,
the test will miss prostate cancer in one man.
